

# CORALS ARE OUR FUTURE FESTIVAL

June & July 2020

## Background

Indonesia is the home of the largest collection of 569 coral reef species, and contributes to 17% of the world's coral reef. More than 36% of them were destroyed. Biorock Indonesia and partners have been working for 20 years, and every year 3000 baby corals are transplanted and nurtured by our team and volunteers.

Covid 19 has stopped many businesses and people movements that reduce the donation and field volunteers. It also became News Headlines which might act as decoy for decision makers creating deals damaging coral reefs. These baby corals need help to survive and thrive.

Without coral reefs, people will have no seafood supply, no medicine to cure disease, houses and buildings collapse from erosion, and no jobs for people.

A Healthy Coral Reef means stronger community, supply of meals, medicine, house protection and income for people.

## Objective

People and Institutions engaged and actively support Coral reef restoration during pandemic Covid 19 and years to come

## Target Audience

People in Indonesia, USA, and other countries interested to participate

# Output

People/ Community/ Institutions adopt at least 2200 baby corals in June-July 2020  
120 Institutions join as Biorock Indonesia Partner/Sponsor/Supporters

# Events

## JUNE
